GLOBAL URANIUM: DRILLING BEGINS AT ISAKANAN

Toronto, ON, February 11, 2009: Global Uranium Corp., (“Global” or the “Company”) a private Ontario corporation, is pleased to report that it has begun a first phase drill program on its Adrar Emoles 4 concession in Niger.

This concession hosts a uranium deposit outlined by previous Japanese drilling and currently hosts an inferred uranium resource of approximately 28 million pounds at an average grade of 2.3 pounds / tonne. It is Global’s intention to confirm the previous drill results and to continue to expand the size of the resource which currently remains open in all directions.

A previously completed NI 43-101 report discussed at the shareholders meeting held in November, 2008, reported total resources in all categories of 33.7 million pounds located both at the company’s Tin Negouran concessions, where all of the drilling has been done to-date, as well as the two Adrar Emoles concessions.

The Adrar Emoles concessions are located in the same vicinity as Areva’s flagship Imouraren deposit, which is currently being developed into the largest uranium mine in Niger. Imouraren hosts a reported 320 million pounds at a similar grade as Global’s Isakanan deposit. Isakanan mineralization occurs in the Madouela formation.

Qualified Person

The drilling program was completed under the supervision of Mr. George Flach, P.Geo., qualified person within the meaning of National Instrument 43-101. Mr. Flach has reviewed the contents of this release.

About Global Uranium Corp.

Global Uranium is a private Ontario corporation founded in January, 2005 by executives with extensive experience in the mining and marketing of uranium. The Company has exploration agreements covering six uranium concessions in the Republic of Niger, covering an area of approximately 3,000 km², as well as owning a database consisting of numerous uranium exploration targets around the world collected over a 30 year period by a major Canadian uranium producer.
